

Mastering the Variation Workflow: Data Preparation to Portal Upload

Determining Your Starting Path

Only one bill/estimate

Multiple running bills/estimates

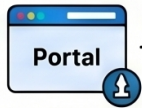

The Timing Advantage

Gathering data before the variation starts is the most 'easy and fast' method.

✓ Fast Path: Before Variation Starts

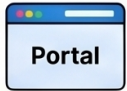

✓ Fast

Open the Portal e-Mb page. Use 'Download e-Mb Bill Data' from the 'HEWP Auto Tools' Tab to automatically fetch dnit and previous quantities.

⚠ Complicated Path: After Variation Started

⚠ Complicated

Preview Entered Item

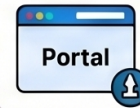

Save PDF

Import Bill/Estimate (Template Tab)

Use 'Preview Entered Item' on the Portal, save the resulting PDF, and then use the 'Import Bill/Estimate' feature from the 'Template' Tab.

✓ Fast Path: Before Variation Starts

✓ Fast

Use the 'Download e-Mb Bill Data' feature before starting to fetch all dnit and previous executed quantities at once.

✗ Manual Data Recovery

✗ Manual

If variation started, you must manually search your own data for old bills to find previous executed quantities.

Launching the Auto E Tool

Once data is available, start the 'Bill Variation' feature from the 'Auto E Tools' Tab.

Offline vs. Portal Data Sheets

You must provide the current bill/estimate (offline) and the portal data (either auto-fetched or imported via PDF).

Managing Previous Bills

If required, select sheets generated by importing PDFs of previous bill/estimate quantities.

Preparation & Final Upload

Preparing the Variation Table

Complete the preparation of the variation table within the tool before moving to the upload stage.

Initiating Portal Upload

Upload Full Variation (HEWP Auto Tools Tab) → Yes

Press the 'Upload Full Variation' button and click 'Yes' when the confirmation prompt appears.

Monitoring Popups

Always monitor the screen for any popup windows during the auto-upload; select required details within popups to allow the process to continue on the Portal.

To Start Variation, we need

if only first or only one bill/estimate

-We have 2 options for getting this qty-

Before variation start
(This is most easy and fast method)

After variation started
(This is complicated and time consuming method)

Requirements

current bill/estimate

Portal data
(dnit qty)

we can get Latest dnit qty from Portal before Variation starts

Open e-Mb Page on Portal where we upload bills. Then Use "Download e-Mb Bill Data" Feature from the "HEWP Auto Tools" Tab. It will auto fetch and download the Portal data (dnit qty and previous qty all at once.)

current bill/estimate

Portal data
(dnit qty)

After Variation started, we can get Dnit qty from Portal.

Open Variation Page on Portal where we upload Variation. Then Use "Preview Entered item" Button in bottom of web page. Then save the pdf.

Use "Import Bill/Estimate" Feature from the "Template" Tab.

if there are multiple running bills/estimate

Then we need Previous Executed Qty.
We have 2 options for getting this qty.

Before variation start
(This is most easy and fast method)

After variation started
(This is complicated and time consuming method)

Requirements

current bill/estimate

Portal data
dnit qty, previous executed qty

we can get previous executed qty from Portal only before Variation starts

we can get Latest dnit qty from Portal before Variation starts

Open e-Mb Page on Portal where we upload bills. Then Use "Download e-Mb Bill Data" Feature from the "HEWP Auto Tools" Tab. It will auto fetch and download the Portal data (dnit qty and previous qty all at once.)

current bill/estimate + Previous Bill/estimates qty

Portal data
(dnit qty)

After Variation started, we can only get Dnit qty from Portal.

For Previous executed qty, we need Previous Bills

Open Variation Page on Portal where we upload Variation. Then Use "Preview Entered item" Button in bottom of web page. Then save the pdf.

Use "Import Bill/Estimate" Feature from the "Template" Tab.

Search you data for old bills

After all required data is available ,
Start "Bill Variation" Feature from "Auto E Tools" Tab

It will ask for offline and Portal data sheets

offline sheet ?

Portal data sheet ?

current bill/estimate

It will auto fetch data from downloaded data.

current bill/estimate + (Previous Bill/estimates qty) (if any and needed)

Select Sheet which is generated by importing Pdf.

After Preparation of Variation Table,
We can Auto Upload it to Portal.

Press "Upload Full Variation" Button from the "HEWP Auto" Tab.

It will ask for confirmation. click yes and it will auto start uploading.

(Always check for any Popup windows which will be shown if any extra info required. Always Select the Required detail in Popup itself. It will auto select on Portal)
