

Always Do Smart Work, Not Only Hard Work

Core Proposition

Speed up Estimate Preparation, Material Consumption, BOQ, and HEWP Uploads by 90%.

Built Exclusively For

Civil Engineers | Contractors | J.Es | Department Employees.

System Status

Stable Release featuring complete HSR 2023 data with latest amendments.

The End-to-End Automation Ecosystem

The Offline Excel Add-in

The Engine: Powerful local Excel processing handles complex calculations (Material Consumption, Steel Weight, BOQ) without lag.

The Browser Extension

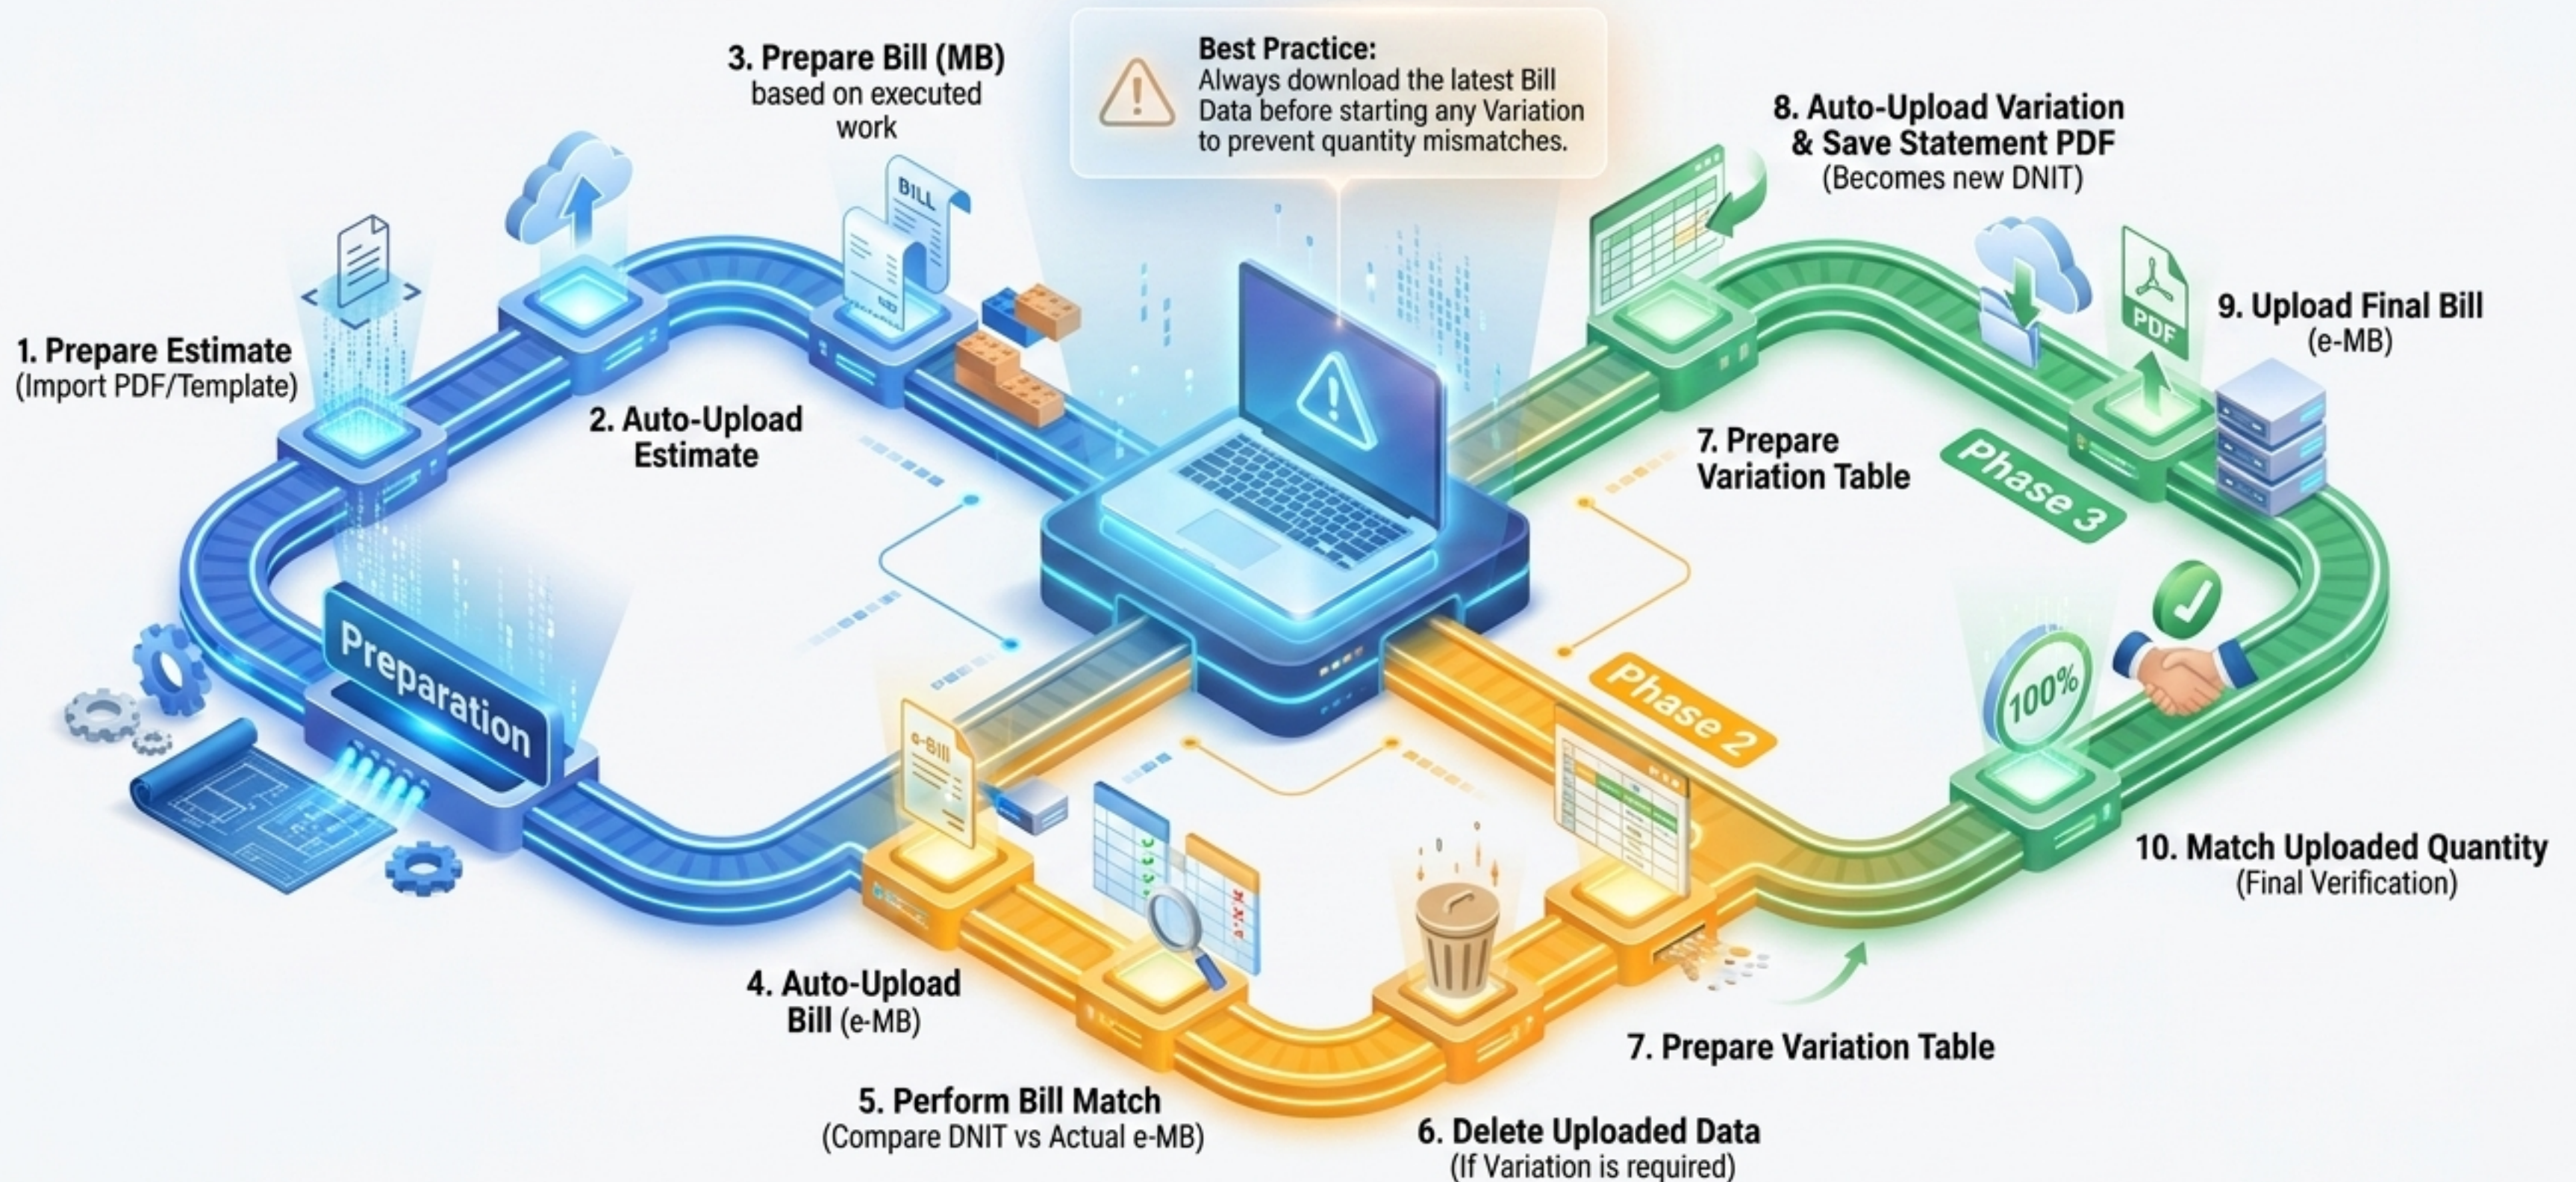

The Bridge: Free Chrome/Edge extension fixes portal drop-downs, Enter-key glitches, and enables bulk actions.

The Live HEWP Portal

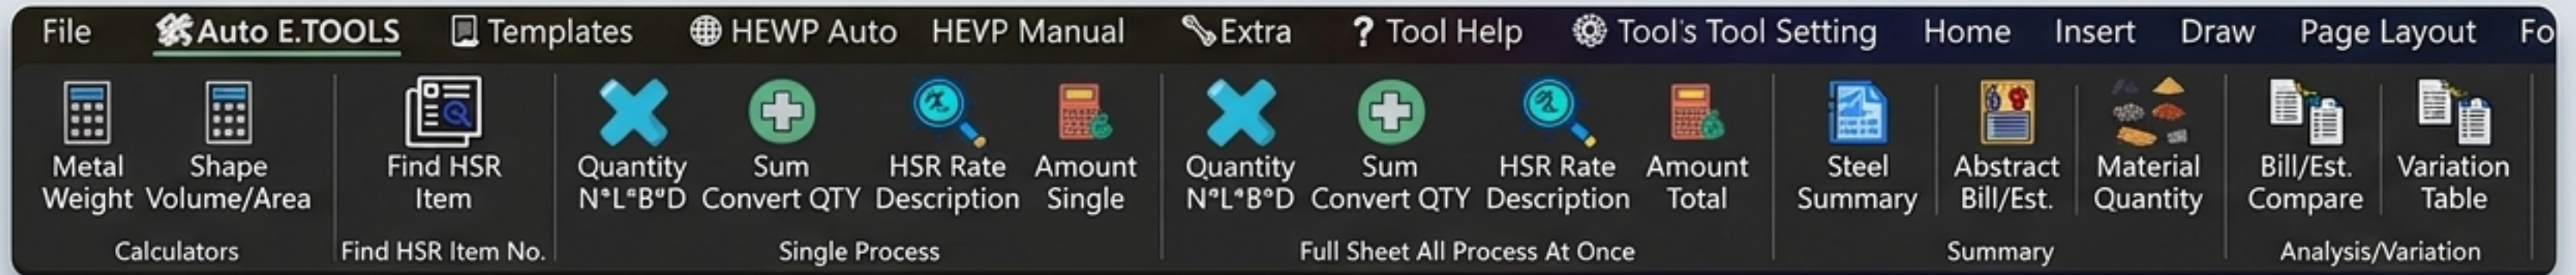

The Destination: Direct, automated integration pushes finished data to the Haryana Engineering Works Portal with zero manual data entry.

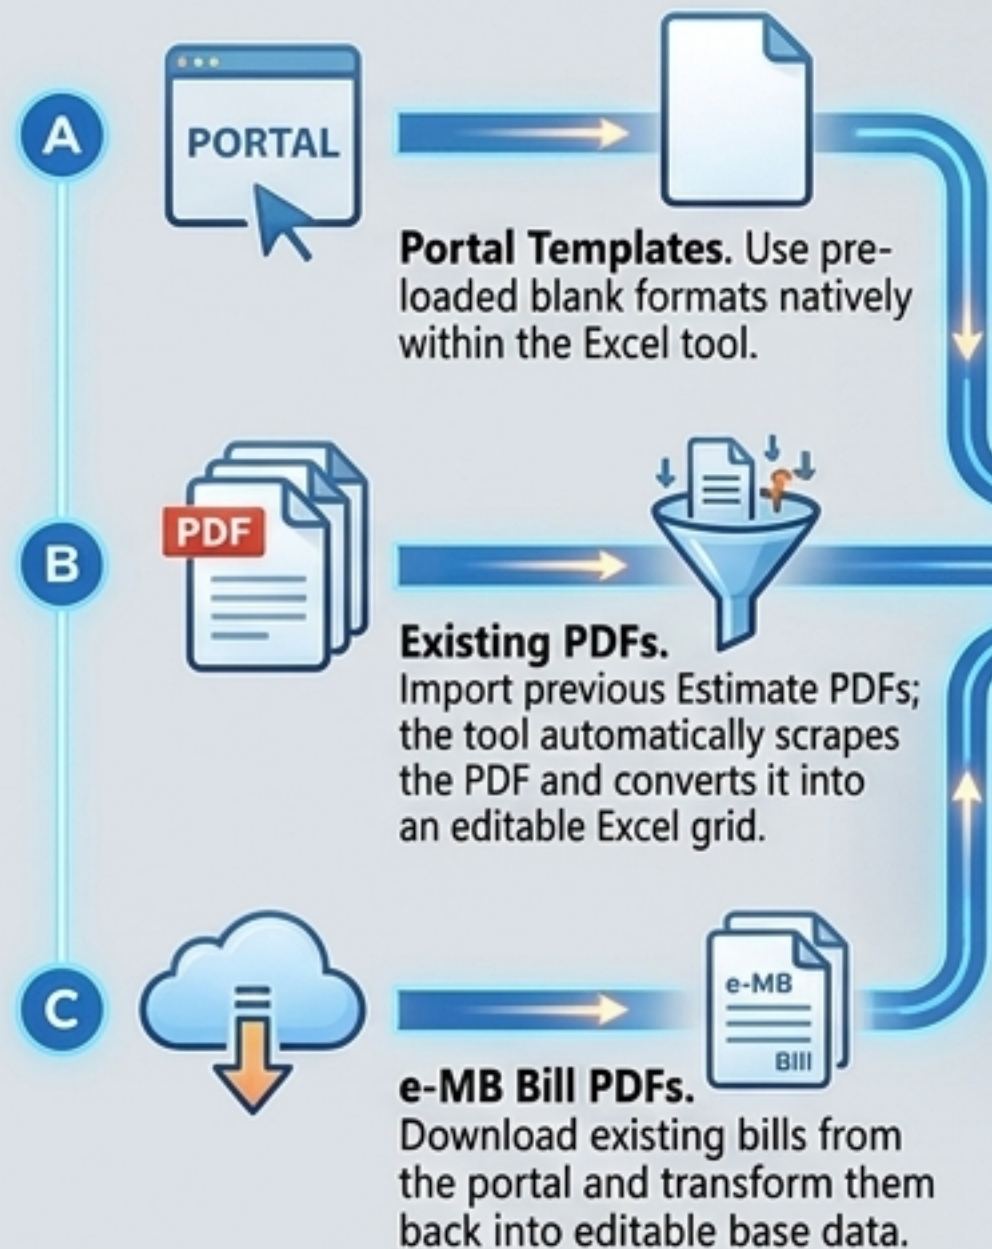

The 11-Step Engineer's Master Framework

Phase 1: Rapid Data Extraction and Estimate Building

Data Source Options

Key Automation Features

HSR Lookup Engine:
Type an HSR number to instantly fetch descriptions, units, rates, and rate types.

Intelligent Unit Converter:
Automatically convert quantities (Nos x L x B x D) to metric units or steel kg on the fly.

One-Click Summaries:
Instantly generate Abstract Bills, Steel Dia-wise Summaries, and District-wise Material Consumption tables.

Phase 2: Bypassing Manual Portal Data Entry

Fast Authentication

Securely save credentials locally to login to the HEWP portal with a single click.

Full Auto Uploads

Push entire e-MBs, Estimates, Templates, or Variation tables to the portal instantly without manual typing.

Semi-Auto Fallback

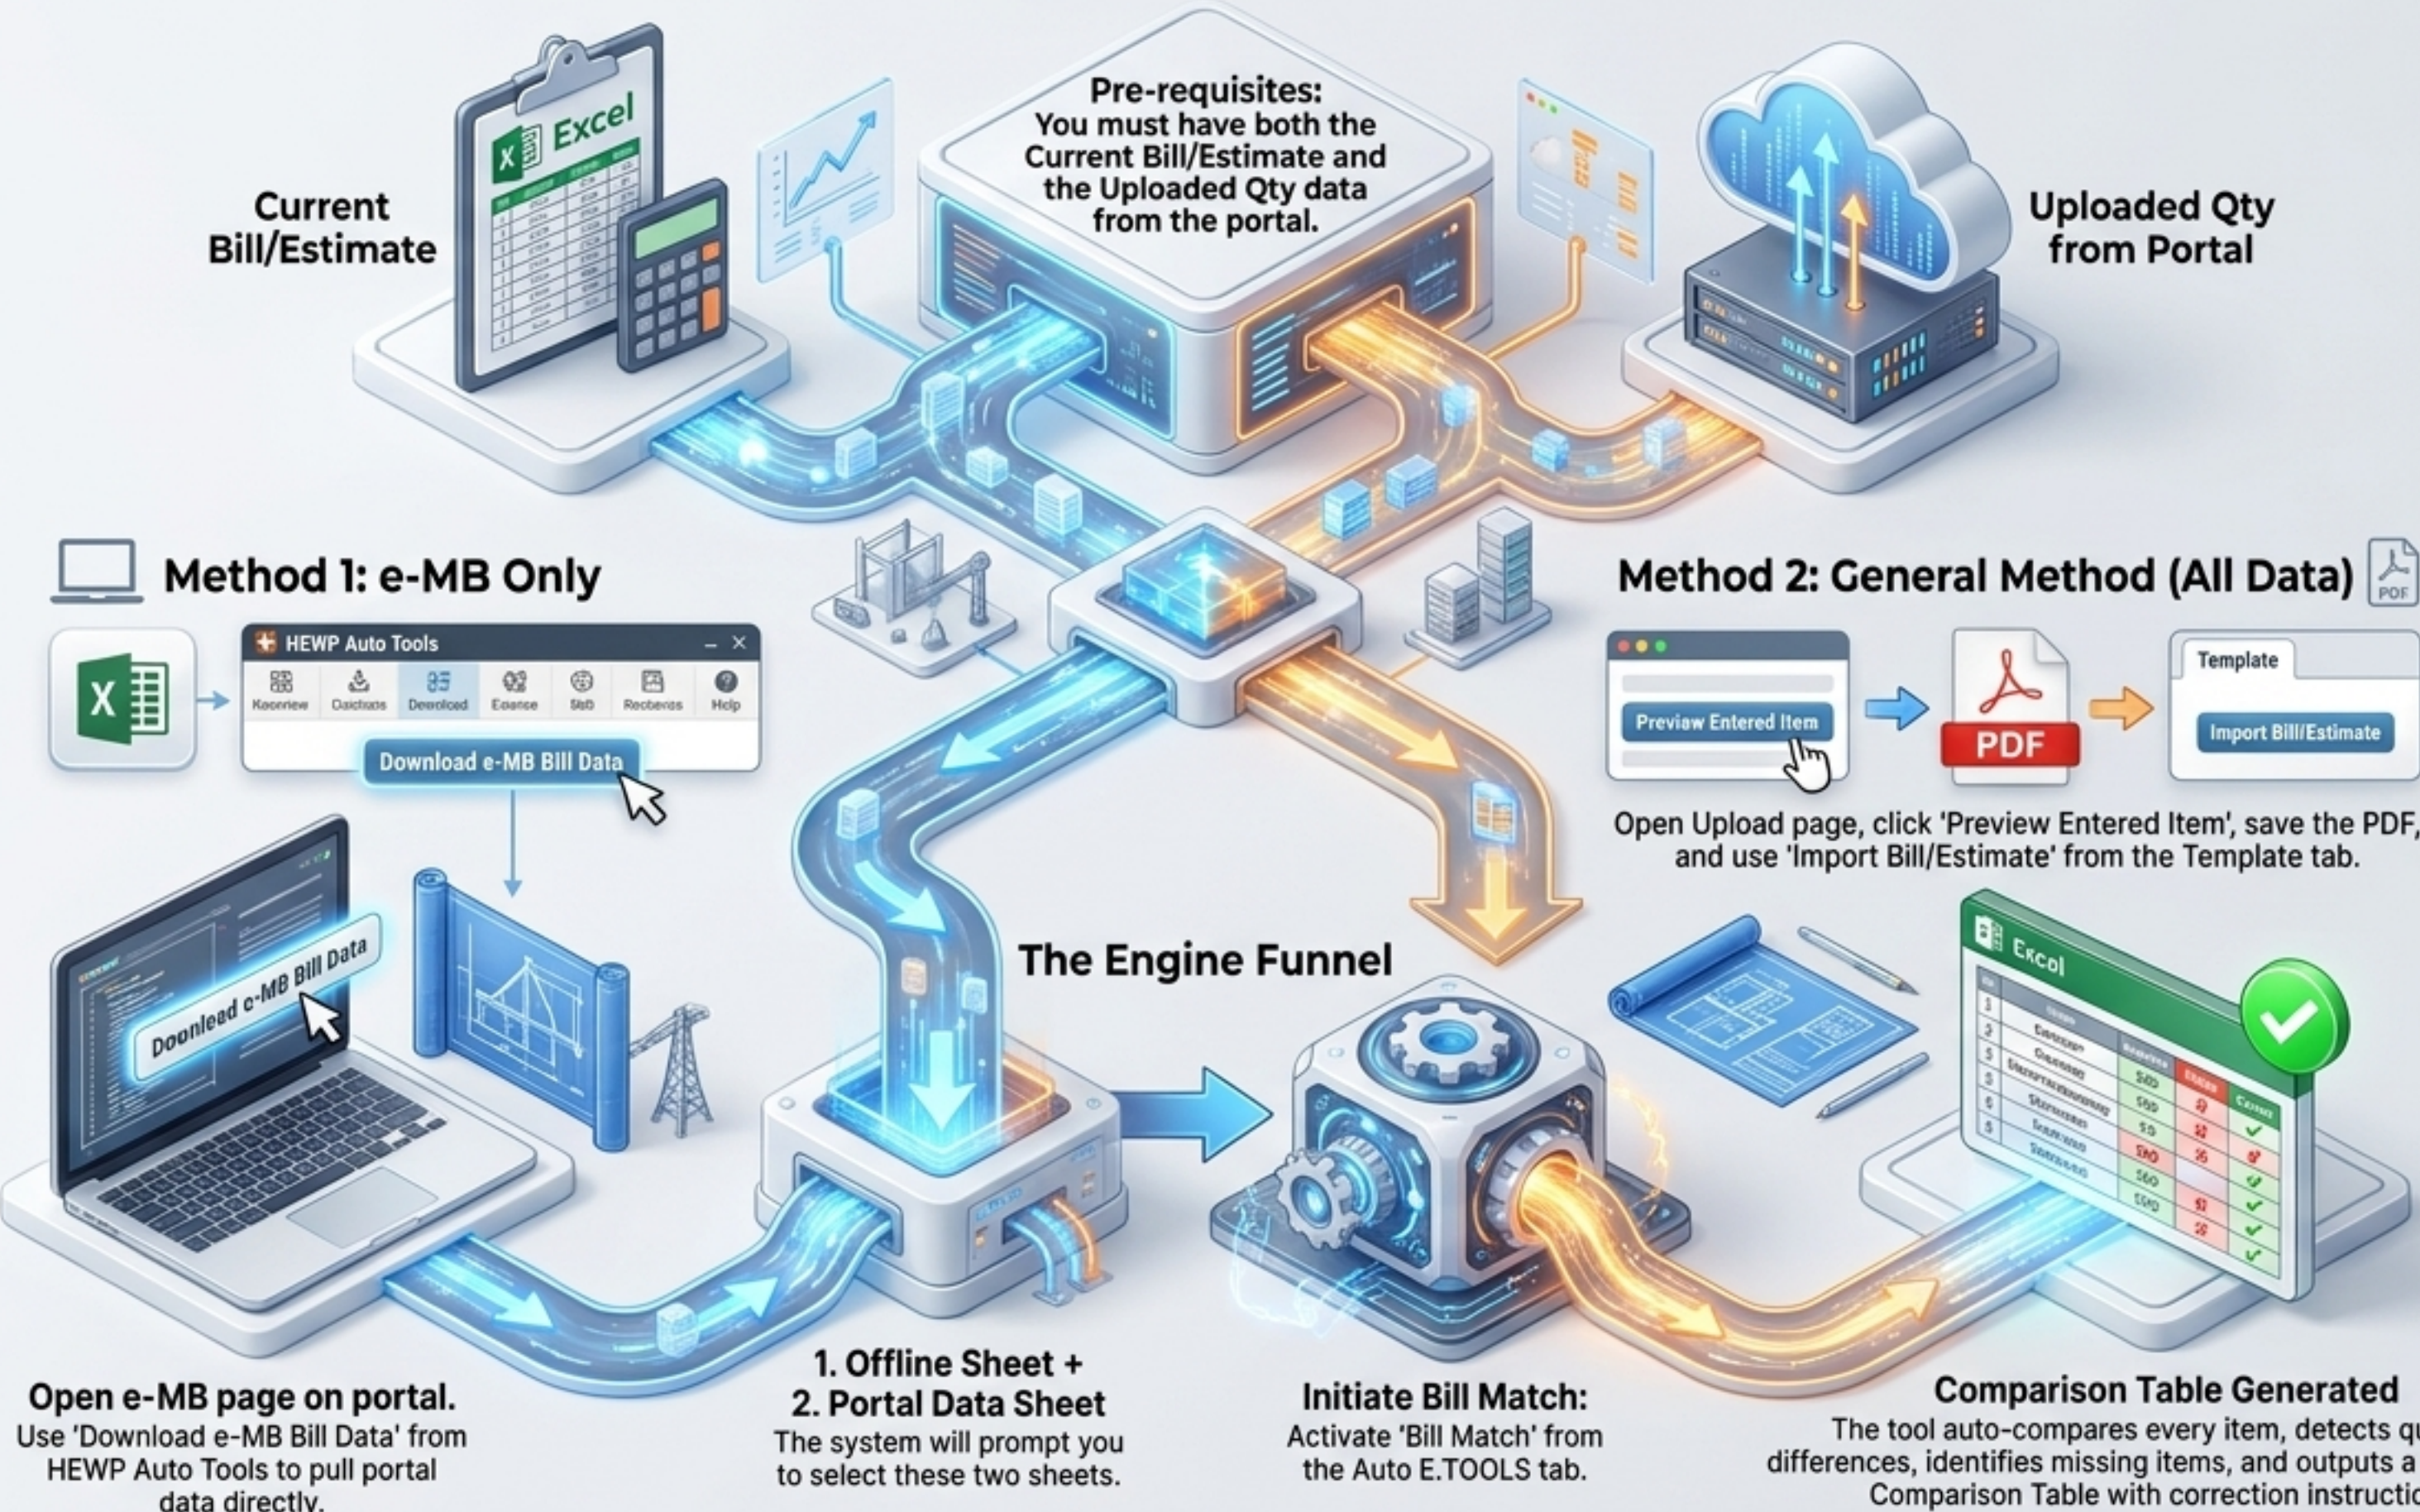

If portal errors occur, use the Manual Data Feeder to upload one specific item at a time with precision control.

Mass Deletion

Delete e-MB Bill Data feature removes all previously filled items on the portal in one click, clearing the slate for variations.

Phase 3: The Bill Match Reconciliation Engine

Phase 4: Seamless Variations and Final Verification

1. Initiate Variation

If the Bill Match reveals discrepancies, use the **Delete All Data** feature to wipe the portal clean.

2. Generate Table

Select the **Variation Table** feature to automatically calculate quantity differences between DNIT and Actual e-MB files.

3. Upload & Lock

Auto-upload the Variation Table to the portal.

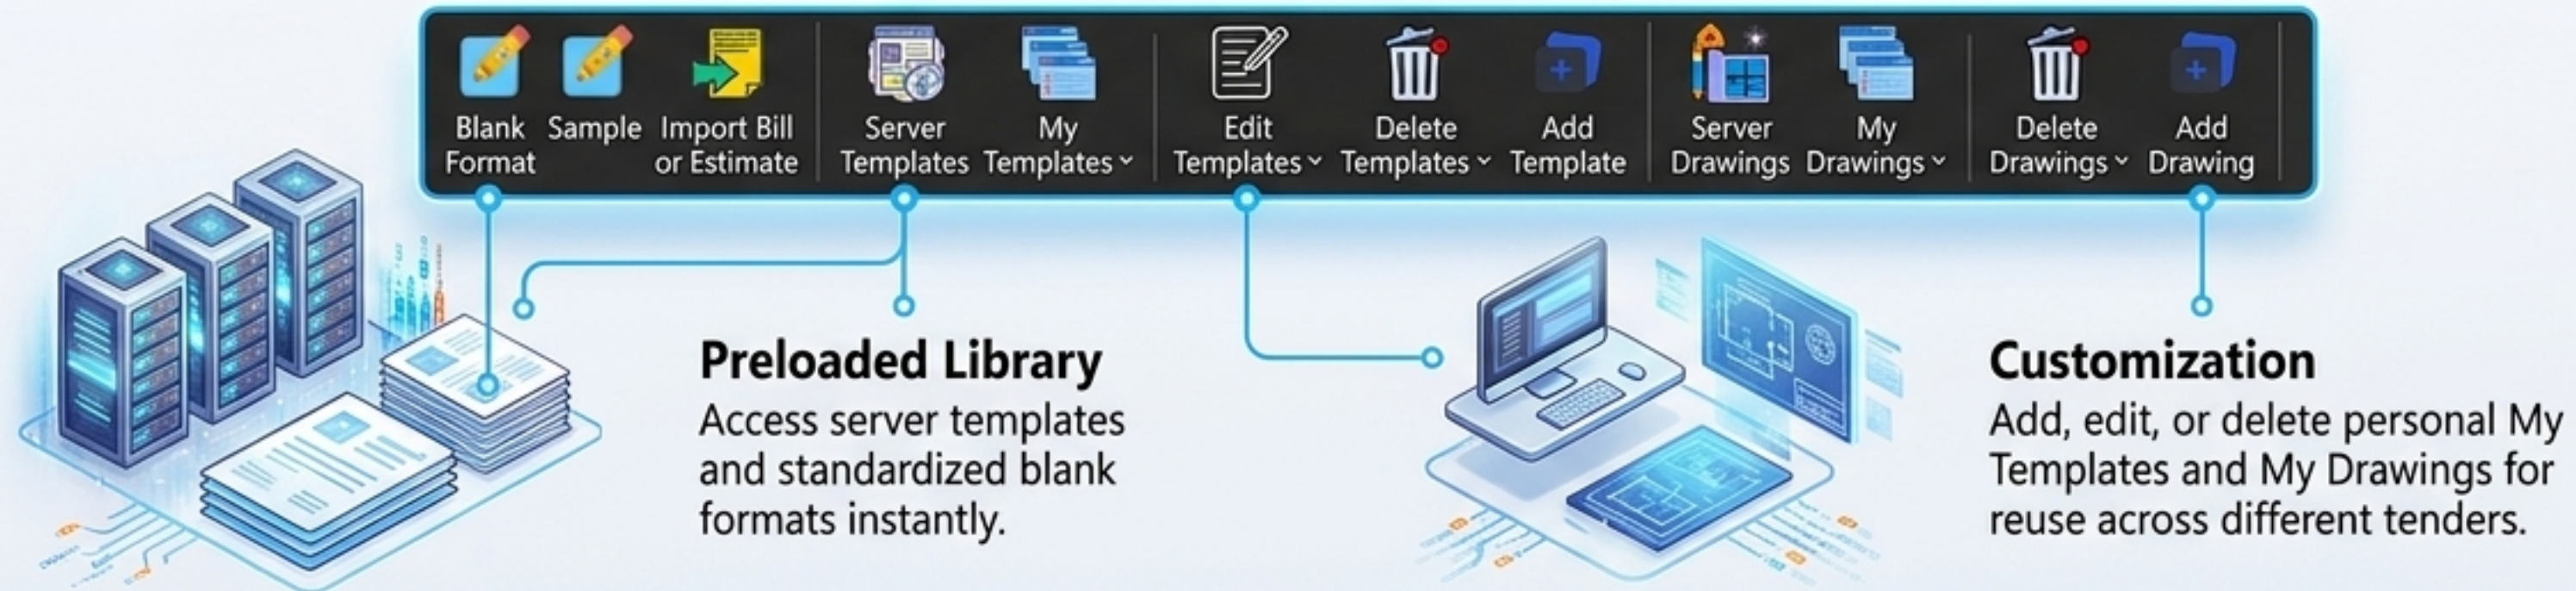

Crucial Step: Click 'Preview Entered Items' and save the Variation Statement PDF. This becomes your new locked DNIT baseline.

4. Final e-MB Upload

Push the finalized Excel bill to the portal. Run one last **Bill Match** against the portal's calculated amount to guarantee 100% financial accuracy before final submission.

The Control Center: Templates and Utility Architecture

Template Management Module

Extra Utilities Module

Fixing the Portal Experience: The Smart Browser Extension

Smart Dropdown Search

Adds advanced filtering and search bars to all portal dropdown menus (including Tenders).

Bulk Actions

Adds a 'Toggle All' checkbox to instantly select or deselect massive lists of items.

The 'Enter Key' Glitch Fix

Stops the portal from erasing your entire form when you accidentally press the Enter key.

Ergonomic Upgrades

Injects Dark Mode for eye strain reduction, important fast-navigation bookmarks, and even a media volume booster.

Note: The extension is 100% free and optional, installed directly via the main setup.

Unlocking the Automation Arsenal

Regular Plan

Estimation & Analysis Focus

- Full Sheet Processing (Qty, Sum, HSR Rate, Amount)
- Steel Summary & Abstract Bill Generation
- Material Quantity calculations
- Bill/Estimate Compare & Variation Table generation
- Import PDFs & Download e-MB data

Premium Plan

Full Portal Uploading Focus

- Includes all Regular Features.
- + Unlocked Portal Uploading Features (Auto-upload e-MB, Estimates, Variations)
- + 0 Restrictions & Full access to all beta tools

Pricing Durations: Available in 30-Day, 180-Day (Popular), and 365-Day tiers.

Special Offer: 30-Day Premium Trial available for just ₹99 for all new users.

1. One-Click Install

Download the lightweight **Online Installer** (~2.1 MB) or standalone **Offline Installer**.
Automatically bundles **Excel Tool + Browser Extension**.

2. Seamless Configuration

Open Excel, activate license, and set preferences (Unit System, Preferred Browser, District) via the **Tool Settings** tab.

3. Always Current

Auto-updates enabled by default to ensure instant access to new features and latest HSR amendments.

System Requirements

Works natively with Microsoft Excel 2016-365 on Windows (7/8/10/11) with Chrome or Edge.
Compatible with all Engineer, Contractor, and Employee HEWP logins.
